

Cultural Psychology Project

You must sign up on the list at the front of the class.

Only two students may have any one subject per class.

Locate one research study, it may not be something we have studied in the past.

You will need to fill out one of the charts for empirical studies for each of your studies. You can get the word document off of Edline if you want to type it up, or you can use the blank charts at the front of the class if you want to hand write them. I prefer that they be typed.

You will then need to return to the PsychoHansonWiki web page and create a link on the Cultural Psych Page. Once you are on the web site, you can get to the Cultural Psych page by clicking on the link on the left hand side.

<http://psychohansonwiki.wikispaces.com/Cultural+Psych>

We are going to format it a bit differently this time. Use the following format.

Your first name and last initial – Your period – Researchers name – Title of article

Highlight Researchers name – Title of article, and create a link to the study.

Then make another sentence below that describing the study.

Then list the numbers of the Essays that this study would help you answer.

Example.

John D – 9th period – [Watson – Little Albert](#)

This is a study showing that fear can be conditioned and phobias can be learned.

This study helps answer Essay questions # 1,5, and 17.

Please be sure to put your study in the right place.

Your entry on the wiki page is worth 25 points and your chart is worth 30 points.
